SKILLS

- UI/UX design - Figma, Photoshop, Prototyping
- Front-end - Javascript, TypeScript, React.js, React Native, Expo, Next.js, HTML5, CSS
- Back-end - Node.js, GraphQL, Express, ORM
- Databases - MySQL, Postgres, MongoDB, MariaDB
- Cloud - AWS

LANGUAGES

- English | Advanced
- Swahili | Advanced
- Borana | Native
- French | Elementary

OBJECTIVE

I am a result-oriented software engineering professional with a passion for designing and developing delightful user experiences on mobile and the web.

EXPERIENCE

JUNIOR FRONT-END DEVELOPER

County government of Laikipia. Kenya | May 2021 - Sep 2021

I was on academic-industrial attachment for three months.

The task was to develop a mobile app that could be used by citizens of the county to pay for county government service fees using the M-Pesa mobile money service integration.

In collaboration with two other interns, we completed the project in three months. I mostly worked on the front-end app.

DATA COLLECTION ENUMERATOR

Kenya National Bureau of Statistics. Kenya | Aug 2019 - Sep 2019

The job mainly involved the collection and submission of the 2019 census data using a questionnaire on digital tablets.

EDUCATION

BSC. INFORMATION TECHNOLOGY

Masinde Muliro University of Science and Technology. Kakamega, Kenya | 2018 - Present

PROJECTS

Smart Lessons app (available on Playstore)

In my experience as a university student since 2018, I was always frustrated with the format and operation of our timetables. That is why I created the Smart Lessons app.

Smart Lessons is a cloud-managed timetable service. It distributes personalized timetables to students and lecturers in a simple and unified format. The schedules are customizable to fit every class's unique needs. Lecturers can change schedules and affected students get any such changes in real-time through push notifications.

Kayo Children's Home app

This was my school project. The app connects needy children in Kayo children's home with sponsors.

Users can see needy children in the orphanage and start sponsoring them. There is a public forum for discussions. I also integrated payment services allowing users to make donations via the app.
